

# Delphix Release 5.3.4

## Extending Delphix Masking Support for AWS Aurora - PostgreSQL and MySQL

Delphix masking can now mask AWS Aurora - PostgreSQL, MySQL, helping enterprises minimize data risk at scale for these data sources. Note that Delphix Masking has supported AWS RDS - PostgreSQL, MS SQL, MySQL, Oracle and MariaDB since the 5.3.2 release.

## SAP HANA 2.0 Virtualization Plugin

The Delphix Dynamic Data Platform now supports SAP HANA 2.0 multi-tenant virtualization. Please note that 5.3.4 plugin is a Controlled Access Release (CA) i.e. a selective rollout to the customer base. More details about customer participation in CA release will be shared in the next few days by PM team.

## Additional benefits that come with this release:

- Delphix Dynamic Data Platform supports dump history file ingestion with this release for SAP ASE.
- Masking API has several net-new endpoints and additional parameters for existing endpoints.
- INTERNAL ONLY - Delphix Support team will use Challenge-Response Authentication to do remote login into the Delphix engine.
- New certifications for Oracle, SAP ASE, IBM DB2, PostgreSQL, EBS, VMware ESX

For detailed information on any of the above items please refer to the release notes,
